Preface

Thank you for buying a VDO CYTEC bicycle computer. The more familiar you get with this model, the more enjoyable your trips are going to be.

Please read thoroughly all the information provided in this manual. You are getting important and useful hints for operation to make you fully benefit from all the technical features of your VDO CYTEC bicycle computer.

We wish you enjoyable trips and rides on your bike with VDO CYTEC
CYCLE PARTS GMBH

Mounting the system

1. Mounting the handlebar holder

The handlebar holder fits handlebars of any diameter. Before mounting the system, decide if you will be using your left or right hand to operate the computer and then mount the handlebar holder on the respective side. Position the handlebar holder, insert the strap and adjust it by tightening the screw.

Warning: Before tightening the handlebar holder, make sure to adjust the position of the computer head (inclination) when the LCD-display is best visible for you. Only when you find the best position tighten the screw.

2. Mounting the speed transmitter

The sensor should be mounted on the same side of the fork as the holder is on the handlebar.

Watch out: Do not tighten the cable ties yet! Accurately position the spoke magnet and the sensor first, then tighten the cable ties.

3. Mounting the spoke magnet

Distance between magnet and sensor should be approx. 1-5 mm.

In case this distance is not achievable in the current positioning, slide the sensor and the magnet on the fork or spoke accordingly.

4. Twist-Click mounting of computer onto holder

The Twist-Click mounting has been exclusively developed for the new line of VDO CYTEC computers.

The computerhead is put onto the handlebar and by a right turn of the computerhead (**TWIST**) fixed to the holder (**CLICK**).

It is just as easy to remove the computerhead from the handlebar holder.

Slightly push the computerhead down, twist it to the **left**, remove computerhead from handlebar holder.

5. Installing battery into computer head

To save battery power, your VDO CYTEC comes with the battery not yet fitted. Prior to initial use you have to install the battery first.

If you find the computer is not functioning properly after a battery change, push the AC-button (Auto Clear) on the rear side of the computer to reset.

Your VDO CYTEC C 10 provides you with following information:

KMH-MPH	current speed indicated in either KMH or MPH, featuring automatic conversion into MPH
TRP	trip counter, counts your trip distance up to 999,99 km or miles.
RID	trip timer, keeps track of the actual riding time featuring automatic start/stop function, up to 9:59:59 (hrs:min:sec)
STP	manual stop watch, counting up to 9:59:59 (hrs:min:sec)
AVS	average speed, accurate to two decimal points.
MAX	maximum speed, achieved during a ride, accurate to two decimal points.
▲●▼	permanent comparison of current and average speed. Deviations are indicated by up/down arrows in the display.
TCNT	Second trip counter featuring a preset mode, intended for use while following road-book instructions.
CLK	clock with 12 h or 24 h selectable display mode.
ODO	odometer, counting distance ridden up to 99,999 KM or M.
WS 1+WS 2	two wheelsizes for two different bicycles selectable.

7. Operating your VDO CYTEC C 10

Button / Key Covering

Your VDO CYTEC C 10 has 2 buttons / keys

Mode 1, Mode 2

These buttons / keys have several functions.
All functions of the respective buttons / keys outlined in the following chart below.

Your display indicates following information	Button / Key to be pushed	Length of pushing the button / key	What is going on?
TRP-AVS-RID-STP-MAX	MODE 1	brief (0.1 sec)	next information from MODE 1 is indicated.
TCNT-CLK- ODO	MODE 1	brief (0.1 sec)	computer changes display information from MODE 2 data to TRP-data of MODE 1
TRP-RID-AVS	MODE 1	normal (1.5 sec.)	TRP-RID-AVS are automatically rotated, one at a time displayed for 1.5 sec.
TRP	MODE 1	long (5 sec)	enter set-up mode for wheelsizes.
CLK	MODE 1	long (5 sec)	enter set-up mode for clock.
ODO	MODE 1	long (5 sec)	enter set-up mode for odometer.
RID-AVS-STP-MAX	MODE 1	long (5 sec)	switching from wheelsize 1 to wheelsize 2 and vice-versa
TCNT	MODE 1	long (5 sec.)	Set-up mode for TCNT (second trip counter) is called into display
TCNT-CLK- ODO	MODE 2	brief (0.1 sec)	next information from MODE 2 is indicated.
TRP-RID-AVS-MAX	MODE 2	brief (0.1 sec)	computer changes display information from MODE 1 data to MODE 2 data. TCNT always being the first information indicated.
TRP-RID-AVS-MAX	MODE 2	long (5 sec)	TRP-AVS-RID-MAX information reset to zero.
TCNT	MODE 2	long (5 sec.)	Second trip counter TCNT is being reset to zero
STP	MODE 2	long (5 sec)	stop watch STP reset to zero
STP	MODE 2	brief (0.1 sec.)	either start or stop run of stop watch

8. Scroll function

To provide any information at a glance, your VDO CYTEC C 10 features a scroll function. Calling up the scroll function automatically displays information for a period of 1.5 sec. Scroll function may be called upon if any of the following information is on display: TRP-AVS-RID. Scroll function is activated by pressing the MODE 1 button for 1.5 sec.

9. Second trip counter TCNT

Your VDO CYTEC features a second trip counter TCNT. This second trip counter allows you to easily follow road-book instructions. The TCNT may be preset to an individual value from which it then counts up. In case you have missed a turning point in your road-book tour, you may return to the tour leg where you have gotten lost, re-enter the correct value and keep going from there.

Set-up mode for your second trip counter TCNT

Step 1: Call TCNT information into display.

Step 2: Press MODE 1 key for 3 sec. Display shows "TCNT" and a flashing number.

Step 3: By pressing MODE 2 key, the number can be changed.

Step 4: By pressing MODE 1 key you proceed to the next number, which you can change by pressing MODE 2 key.

Step 5: Once you have entered the last number for your TCNT, exit set-up mode by pressing MODE 1 key for 3 sec..

Watch out: When you exit set-up without having completed entering your data, the computer may well work with faulty values leading to misinformation in your display.

Reset TCNT to zero

The second trip counter TCNT is reset to zero by pressing MODE 2 key for 5 sec. Before resetting to zero, make sure that TCNT information is called into display.

Watch out: Pressing the MODE 2 key for 5 sec. without TCNT data being displayed probably resets your TRP-RID-AVS-MAX data to zero.

10. Manual stop-watch STP

Your VDO CYTEC C 10 features a manual stop-watch. With information STP being displayed, you may operate your stop-watch with the MODE 2-button.

MODE 2 START/STOP

Watch out: Pressing the MODE 2 button for 5 sec. without STP data being displayed resets your TRP-AVS-RID-MAX data to zero.

**Press MODE 2 5sec.
Reset**

- MODE 2 press when STP is displayed = starting the stop-watch
- MODE 2 press again = interrupt the stop-watch
- MODE 2 press again = stop watch continues

11. Comparison of current and average speed

Your VDO CYTEC C 10 compares your current speed with your average speed. The outcome of this comparison can be seen in your display by the use of symbols. No matter which information is currently displayed, this data keeps you updated on the relation of your current speed and your average speed.

Your current speed is faster than your average speed. Accuracy +/- 1 KMH/MPH

You are currently riding as fast as your average speed. Accuracy +/- 1 KMH/MPH

Your current speed is slower than your average speed. Accuracy +/- 1 KMH/MPH

12. Set-up mode

Your VDO CYTEC C 10 features the following set-up procedures

wheelsize 1 = WS1
wheelsize 2 = WS2
clock = CLK
odometer = ODO
Trip Counter=TCNT

set-up starts out of TRP in display
set-up starts out of TRP in display
set-up starts out of CLK in display
set-up starts out of ODO in display
set up starts out of TCNT in display

No matter which set-up mode is used for your VDO CYTEC C10, the procedure is the same.

You can start the set-up mode for a certain display by pressing the MODE 1 button for 5 sec.

With this MODE button you may also exit the set-up mode at any time.

Once the set-up mode is activated, MODE 1 and MODE 2 buttons are covered with following instructions:

MODE1 changing from one enter display to the next enter display
MODE2 selection of figure to be entered, changing from KMH to MPH mode

13. Selecting the wheelsize

Your VDO CYTEC C 10 can work with two different wheelsizes (WS1 or WS2), i.e. one wheelsize for your road bike the other one for your mountain bike. When using the respective bike you can just switch to the proper wheelsize.

Wheelsize is only selectable if any of the following information is displayed: AVS-RID-STP-MAX

The currently active wheelsize is indicated in the display by WS 1 or WS 2. You can switch from wheelsize 1 (WS 1) to wheelsize 2 (WS 2) and vice-versa by pressing the MODE 1 button for 5 sec.

14. Entering your wheelsize

You may enter **two** different wheelsizes into your VDO CYTEC C 10, i.e. one wheelsize for your street bike and another one for your mountain bike.

Your VDO CYTEC identifies different wheelsizes as WS 1 = wheelsize 1 and WS 2 = wheelsize 2.

following defaults are entered
wheelsize 1 = WS1 = 2155 mm
wheelsize 2 = WS2 = 2000 mm

Watch out: Above defaults are automatically applied after a battery change.
After a battery change, the correct wheelsizes for your bikes have to be re-entered.

How is the wheelsize precisely determined?

Place the front wheel of your bike with the valve at the bottom, mark this position with a line and push your bike ahead until exactly one rotation of the front wheel is completed. Draw another line where the valve now is. Take a ruler and measure the distance between marks 1 and 2 which reflects the wheelsize = wheel-circumference. The figure measured (inches or mm) is the wheelsize to be entered into your computer.

Programming (setting up) your wheelsize

Step 1: Call TRP information in your display.

Step 2: Press MODE 1 button for 5 sec. "WS1" is displayed along with an alternating flashing symbol for KMH and MPH.

Step 3: By pressing the MODE 2 button you can choose whether you want MPH or KMH readout on your display.

Watch out: Your choice of either MPH or KMH applies for both wheelsizes WS 1 and WS 2.

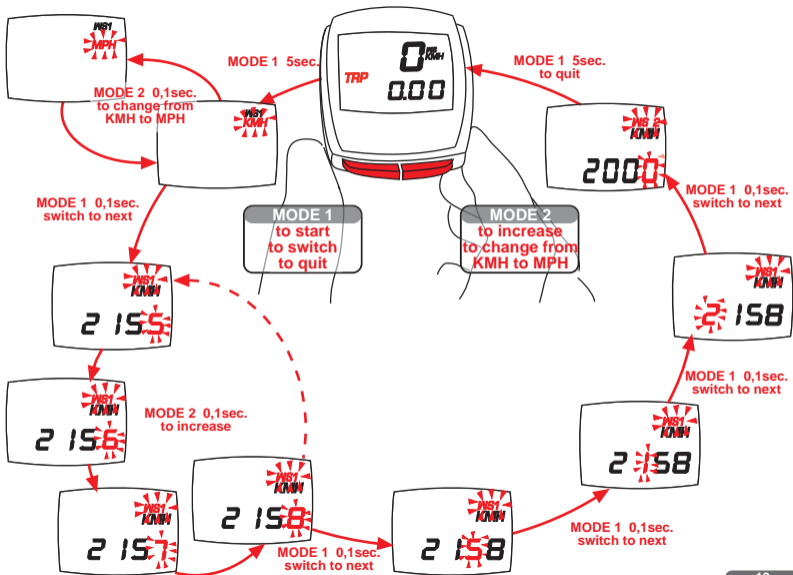

Step 4: Once you have chosen your measuring unit, continue by pressing the MODE 1 button briefly (0.1 sec). Now, either the default value or the wheelsize value previously entered (WS 1) is displayed with the last number flashing.

Step 5: With buttons MODE 1 and MODE 2 you can enter wheelsize 1 previously determined. Then you enter your measurements for wheelsize 2 (see set-up mode).

Watch out: The computer wants you to enter your wheelsizes **one at a time**, first WS 1, then WS 2. You may exit setting up wheelsizes at any time by pressing the MODE 1 button for 5 sec.

Step 6: Once you have entered the last number for wheelsize 2, the computer automatically goes back to normal mode. You may also exit the set-up mode at any time by pressing the MODE 1 button.

Watch out: When you exit set-up without having completed entering your data, the computer may well work with faulty values leading to misinformation in your display.

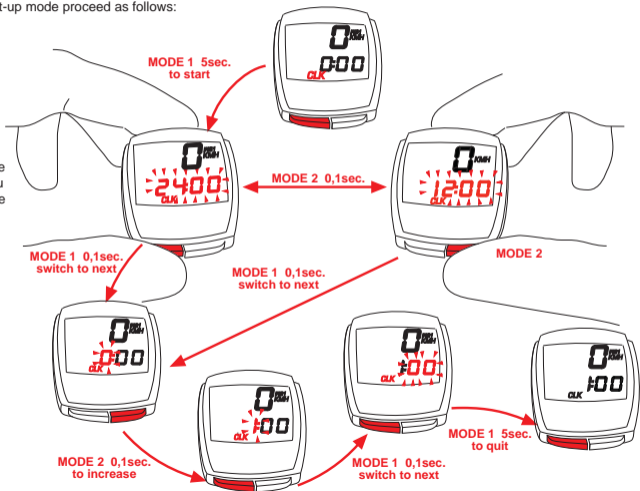

15. Setting the clock CLK

Your VDO CYTEC C 10 features a clock with hour and minute display. 12 h or 24 h display selectable.

To access the clock set-up mode proceed as follows:

Step 1: call in the CLK information into your display.

Step 2: Press the MODE 1 button for 5 sec. The set-up mode for the clock starts. You will either see the figure "24" or "12" flashing reflecting the hour-mode programmed. To set up your clock use MODE 1 and MODE 2 buttons. (see set-up mode).

16. Programming (setting-up) your odometer ODO

You can enter individual odometer values into your VDO CYTEC C 10 at any time, i.e. transferring data from your old computer into your new VDO CYTEC C 10 or after a battery change.

Watch out: after a battery change, your data for total ODO is reset to zero.

TIP: If you want to re-enter your totals after a battery change, take down the value for ODO before removing the battery.

Step 1: Call information for ODO into your display.

Step 2: Start the set-up mode for odometer by pressing the MODE 1 button for 5 sec. The last number is flashing.

Entering data is done by MODE 1 and MODE 2 buttons. (see set-up mode)

17. Resetting information to zero

The following information may be reset to zero with your VDO CYTEC C 10.

TRP-RID-AVS-MAX These information here is simultaneously reset to zero.

TCNT This information is **singly** reset to zero.

STP This information is **singly** reset to zero.

Information must be reset to zero by pressing the MODE 2 button for 5 sec.

Watch out: Take care that the exact information to be reset is on display.

If either of the following information, TRP, RID, AVS or MAX are displayed and you want to reset to zero by pressing the MODE 2 button, be aware that the remaining three information are **simultaneously** zeroed.

18. Stand-by-mode

Your computer VDO CYTEC C 10 features a stand-by-mode in order to save battery power.

Your computer changes into stand-by-mode if it has not received any speed impulses for 5 min or no button has been pressed in the same period of time.

The time of day (CLK) is still displayed in stand-by-mode, though.

By pressing any button or just continuing your ride, this will end stand-by-mode and return you to the appropriate mode.

19. Battery change

Tip:

Take down your total and wheelsize prior to battery change. see 5.

In case the computer is not properly functioning after a battery change, push the AC-button (Auto Clear) on the rear side of the computer to reset.

Watch out: old batteries require special disposal

Hg

This chart outlines possible malfunctions, their causes and solutions.

malfunction	possible cause	solutions
irregular LCD readout (i.e. after battery change)	computer software is not running smoothly	press AC-button at the rear of computer head.
speed display does not appear	check for proper distance between sensor and magnet cable from sensor to computer broken computerhead is incorrectly twisted on handlebar holder no wheelsize entered	readjusting distance between sensor and magnet. check cable and replace if necessary. place computerhead on handlebar holder and twist until detent (CLICK) enter your wheelsize
display fades or disappears	battery in computer empty temperatures below 5° C (40° F) dull display readout	check battery power and replace it if necessary. back in normal temperatures, display picks up working correctly.

21. Warranty

We warrant VDO CYTEC models (sensor, computer head and handlebar holder) to the original purchaser for five years from date of purchase against defects in material and workmanship. This does not cover the batteries and defects resulting from normal wear and tear, improper care, accidents, abuse or alteration.

Please take care to retain your receipt of purchase.

In case of legitimate complaints, you are entitled to receive a comparable replacement model. Due to possible model changes, your model might not be available any more.

You may contact your retailer or store where you purchased your VDO CYTEC or send the computer directly to us:
